

## Lift Truck Safety

A lift truck is an important piece of equipment that is used to transfer material, products, machinery, etc., through a facility. When used properly, forklifts are a great asset; however, when operated incorrectly, they can cause tremendous damage to the facility and its employees

This training session complies with the classroom training requirements of the new OSHA standard for sit-down counterbalance lift trucks.

The goal of this training session is to make sure you have a complete understanding of:

- Hazards and forklift stability
- Inspecting and operating a forklift

All Operators will have to successfully complete a written exam and demonstrate practical skills of the following:

- a. Pre shift Inspection
- b. Safe Operation of the Fork Lift
- c. Placement and Removal of Pallets in Rack
- d. Safe Lift and Travel Skills
- e. Safe Parking Procedures
- f. Propane Cylinder Exchange
- g. Electric Battery Safe Handling
